Weight: 0.00kg

Dimensions: 0.00cm x 0.00cm x 0.00cm

Price: \$200.00

Ex Tax: \$200.00

Short Description

Introducing the perfect companion for my DeLorean MOC—the Volkswagen T2!

Description

Introducing the perfect companion for my DeLorean MOC—the Volkswagen T2! This classic van is not only a stylish addition to any LEGO city but also a fun nod to transporting that “dangerous amount of plutonium” to wacky scientist types. With ample room for passengers, it’s ready to hit the road (or the time circuits) in style.

Please note that for this build, I prioritized style over playability when it came to the wheels. As shown in the photos and instructions, the wheels aren’t connected as securely as they might be for rolling play, and I wouldn’t recommend using it as a rolling vehicle. However, if you’re keen on making it functional, I’ve included details for an easy modification in the instructions to enhance the wheel connections so that it can roll smoothly.

I always enjoy sharing my instructions and seeing the creative ways you all bring these designs to life. If you decide to build this Volkswagen T2, I’d love to see how it turns out in your LEGO city. Please consider posting a picture of your version—I’m excited to see your unique takes on this classic van!

Happy building, and have fun adding this iconic vehicle to your collection!
